

The graph displays the partial pressure of arterial oxygen (PaO_2) in mmHg over a 30-hour period. The y-axis ranges from 36 to 50 mmHg, and the x-axis ranges from 0 to 50 hours. The data points are connected by a line, showing a highly variable trend. Key features include a sharp drop at 14 hours (B) and a subsequent rise after intervention (C). A legend in the top right corner identifies the data as PaO_2 .
